EDUCATION

University of Florida

Gainesville, FL

Bachelor of Science in Computer Science | GPA: 3.59

May 2028

- **Relevant Coursework:** Data Structures & Algorithms, Operating Systems, Information & Database Systems, Computer Organization

EXPERIENCE

Software Developer

September 2026 – Present

Kaizen

- Integrated an AI-assisted coding and autograding platform with Canvas LMS across **4 workflows**: multi-file coding, pre-submit test validation, autograding, and context-aware AI feedback within university course environments
- Support a production platform deployed across **5 university courses** serving approximately **500+ students**, maintaining automated validation and grading workflows used in live course environments

Senior Developer

August 2026 – Present

UF Software Engineering Club

- Built an administrative content-management system with role-based access control for a **14-member executive and advisory board**, enabling leadership to directly update website content without modifying source code
- Supported club web infrastructure for meetings with **100+ attendees**, maintaining reliable access to event information and member-facing content during recurring club events

PROJECTS

ReactorLab | *Go, Docker, PostgreSQL, Ollama, Cloudflare, Linux* | [GitHub](#) | [Site](#)

August 2026 – Present

- Built a self-hosted developer cloud on Ubuntu with **3 integrated services**: MiniDeploy for streamlined application deployment workflows, MiniBase for PostgreSQL provisioning, and MiniAI for local infrastructure diagnostics
- Operate **6 deployments** across **8 Docker containers** and **2 PostgreSQL databases**, with health monitoring, deployment history, centralized service management, and real-time visibility into application and database status
- Secured ReactorLab through **4 protection layers**: Cloudflare Access, loopback-only origins, firewall rules, and server-side authorization controls

MyScheduler | *React, Node.js, Express, PostgreSQL, Prisma* | [GitHub](#) | [Site](#)

August 2026

- Built a full-stack workforce scheduling platform used by **30 employees** to submit availability and requested hours through a centralized weekly scheduling workflow for ongoing staff coordination, shift planning, and team coverage
- Engineered scheduling logic around **4 core constraints**: employee availability, staffing requirements, required role-based qualifications, and weekly hour limits, while preventing conflicts and balancing employee workloads fairly
- Deployed the platform for recurring weekly use across **5+ production scheduling cycles**, supporting reliable workforce schedule generation after project completion

Golf Mullet | *React, Node.js, Express, MongoDB, JWT* | [GitHub](#) | [Site](#)

January 2025 – August 2026

- Built and presented a full-stack e-commerce demo for a client with **6 customer workflows**, including product browsing, search, favorites, cart management, accounts, and authentication across a responsive web experience
- Engineered REST APIs and MongoDB models across **2 core data domains**—products and user accounts—with JWT authentication, password hashing, and persistent user functionality

TECHNICAL SKILLS

Languages: Go, Python, C++, JavaScript, TypeScript, SQL

Frameworks/Libraries: React, Node.js, Express, Django, Tailwind CSS

Technologies: PostgreSQL, MongoDB, Docker, Git, GitHub, Linux, Cloudflare, Ollama
